

The New Age Mathematician...Changing the World One Step At A Time

 by: Christy HollisJerald Bothell began his studies at Syracuse University. He received his B.S. from there in 1990 and moved to the University of California at Berkeley to undertake research in the area of theory of probability. After completing his Ph.D., Bothell spent the years of 1995-96 in Vegas to study the addictive habits of casino players and their magnetic draw to this city. Throughout this period, Bothell continually worked on this one area which fascinated him. One of his students sums up this work:- It is evident that Dr. Bothell's contributions to the field of probability are of considerable depth. However, what sets them apart is their marvelous originality. This is also true of his subsequent work on statistics. In 1997, Dr. Drusler and Dr. Kingsman, authors of Integrated Mathematics describes Bothell's contributions in the fields of statistics and probability: Bothell has fantastic geometric insight and vision: his ideas have completely revolutionized the study of probability in 2 and 3 dimensions, and brought about a new and interplay between analysis and geometry. In 2000, Dr. Bothell wrote an advanced version of the Ultimate Lottery System and immediately used its hidden secrets. His results yielded him a net gross of 5.5 million dollars in one year. Bothell's work on statistics and its results has established him as well known guru in lottery circles nationwide. Kingsman describes this geometrical work in the following summary:- Bothell's results are surprising and beautiful. The method is a new level of geometrical analysis - in the sense of powerful geometrical estimation on the one hand, and spatial visualization and imagination on the other, which are truly remarkable. Dr. Bothell has received many honors in addition to his work in the field of the theory of probability. He now resides in Texas with his wife, Eva, and has sold the copyrights of his lottery system to Pooh Bear Enterprises. He stays in frequent contact with the CEO and staff of P.B. Enterprises to ensure the accuracy and quality of his work. His goal is to help as many people as he can to reach their life dreams and share the great fortune of this land. Dr. Bothell list his hobbies as cinema and reading, and his favorite sports are football and golf.

About the Author

Christy Hollis is a graduated of Devry Tech and is currently studying in the field of Probability under the supervision of Dr. Jerald Bothell.
